

150 HOURS RECOVERED. 95% LESS REPORTING. ZERO MANUAL TOUCHES.

SMITH AVENUE
INSIGHTS

Turning a 30-hour weekly reporting grind into a daily, automated pipeline.

ACTIVECAMPAIGN • Email marketing SaaS • Marketing analytics & operations

THE CHALLENGE

A weekly reporting grind eating the team alive

Every single week, 6 to 10 team members spent 30+ hours building the same recurring PowerPoint deck. The process was entirely manual: writing queries by hand, filtering and adjusting each one before every cycle, copying results into shared CSVs, pulling chart screenshots one at a time from multiple sources, and updating dashboard filters individually. Then they did it all again the next week, with end-of-month reporting stacked on top.

AN OVERBURDENED BI TEAM

The internal BI team was stretched beyond capacity. Stakeholders across the business needed supplemental data beyond what the weekly report covered, with no efficient path to get it. Every ad hoc request created a bottleneck, with no bandwidth or tooling to respond without pulling resources off other priorities.

RISK AT EVERY TOUCHPOINT

Every manual step introduced risk. Data moved across multiple systems and files by hand, compounding the chance of human error at each stage. Errors were often caught only after reports had already shipped, so decisions were being made on numbers no one could fully trust.

AT A GLANCE

CHALLENGES

- 30+ hours per week on manual report builds
- 6–10 team members tied up in repetitive pulls
- BI team unable to handle ad hoc requests
- High risk of data-entry errors each cycle

GOALS

- Eliminate manual reporting workflows
- Ensure data accuracy and consistency
- Give stakeholders daily access to fresh numbers
- Free the BI team for strategic work

“

Our team was spending significant time each week on a manual reporting process that was still producing errors. Smith Avenue Insights rebuilt how we handle that work. Now the data is accurate, the process is automated, and the team is focused on higher-value work. It's been a meaningful improvement to how we operate.

Nick McClanahan

Analytics & Operations,
ActiveCampaign

THE SOLUTION

Automated pipelines, a single source of truth

SAI partnered with ActiveCampaign to redesign the reporting workflow end to end, removing manual intervention at nearly every stage. The full implementation was completed in just 2 to 4 weeks.

DYNAMIC DASHBOARDS

Dashboards with intelligent filtering that adjusts automatically by reporting period, with separate automated pipelines for the weekly and end-of-month cycles.

MORNING DATA FEEDS

Data is refreshed and ingested into shared documentation every morning before the business day begins, with automated feeds wired directly to the shared reporting files.

ONE SOURCE OF TRUTH

A centralized dashboard drives every chart in the weekly deck. The only manual step left is placing the pre-built assets into the final presentation.

BUILT ON AMAZON QUICK

SAI's recommended BI platform. Native AWS integration powers the automated pipelines, interactive self-service dashboards, and the scalability to grow as reporting needs expand.

RESULTS

METRIC	BEFORE	AFTER
Weekly report build time	30+ hours	1–2 hours
Monthly hours on reporting	150+ hours	~8 hours
People in the manual process	6–10	Minimal oversight only
Monthly recovered value	n/a	\$10,000–\$20,000
Manual data-entry errors	Frequent	Nearly eliminated
Data freshness	On-demand, manual	Daily, automated
Implementation timeline	n/a	2–4 weeks

01

Massive time recovery

150 hours per month returned to the team for strategic work instead of repetitive data pulls.

02

Near-zero errors

Automated pipelines removed the manual touchpoints that introduced inaccuracies every cycle.

03

Always-on access

Stakeholders get fresh, reliable numbers every morning without requesting a thing.

WHY SMITH AVENUE INSIGHTS

Smith Avenue Insights is an AWS Partner specializing in consulting and implementation for companies modernizing their reporting and analytics operations. We pair deep data-strategy expertise with hands-on implementation to deliver measurable outcomes in weeks, not months. Amazon Quick sits at the center of our approach, providing the scalability, automation, and self-service that make these transformations sustainable.
